So I have two questions: Does anyone know a way to compose this that will work given the above circumstances? What's a good alternative for the operator I'm trying to simulate here (since it's non-existent)? A: Using forkJoin may be the easiest way. Try using forkJoin: forkJoin( observable\$1, observable\$2 ) .subscribe( result => console.log('Result', result), error => console.log('Error', error) ); See also kristopolus blog post on forkJoin. A: Use combineLatest with a forkJoin const input\$ = this.getInput(); const output\$ = this.getOutput(); Observable.combineLatest( input\$, output\$, ...
